

# Phishing Alert

Dear Valued Customer,

At ABC Banking Corporation, we take cybersecurity very seriously and we continuously ensure that the bank offers you a secured environment for your online banking. For this reason, we wish to call your attention to recent cyberthreats targeting the banking sector at large (as well as online services and renowned brands).

Currently, a series of emails are being sent out to bank customers from email addresses, which at first sight look similar to those of local and international banks, and requesting you to open a link to change your login credentials.

Kindly note that ABC Banking Corporation will never send you any links via email without informing you prior. Under any circumstances, do not follow up these emails as the aim behind is to steal your username and password for malicious purposes.

Should you receive such email/s or you think that you may have received an email from ABC Banking Corporation and which looks suspicious, please delete it/them immediately and inform your Relationship Manager.

## How can you easily detect spear phishing scams?

-  The email address contains a spelling error
-  The email contains a link which redirects you to an unsecure website (different from the bank) and which requests personal information
-  The tone of the email is different from the communication you usually receive from the bank

## How can you avoid spear phishing attacks?

-  Do not use passwords which can be easily guessed
-  Do not use the same passwords on multiple platforms
-  Do not click on links – go directly on the website and check if the web page exists on the official bank's website ([www.abcbanking.mu](http://www.abcbanking.mu))
-  Do not share your personal information (username/password) with anyone – not even any representative from ABC Banking Corporation

Please contact your Relationship Manager for any additional information. Assuring you of our best services at all times.
